

Composite Single Door Threshold

Technical Details

Product

Threshold

- We are fixated with offering the best possible looking door. Even though it is only 15mm high, and Part M compliant, the wheelchair threshold can still be seen from outside. That's why Door-Stop wheelchair thresholds will always match the external colour you chose for the door frame. This isn't something you need to select, you just get it as standard.
- In the same way that if you order a colour door the aluminium door drip is exactly the same colour. The door drip does a really important job, but with so many beautiful aspects to a Door-Stop door you won't want the door drip stealing the eye.

Exitex MDS25

- This threshold option, which is available on all Door-stop standard and FD30 doors, is wider than the current Door-stop threshold at 115mm and provides greater flexibility when it comes to installation.
- The MDS25 also has improved weather performance due to a compression rebate seal (tested on numerous occasions to 150Pa air and water) and superior thermal efficiency because of an improved thermal break.
