**Information Key**

- T = Toughened Glass
- L = Laminated Glass
- XX = Knock On 20 | 35 | 50
- D = Dummy Vent
- J-S = Joining Strip
- TV = Trickle Vent

Stone bays / sash windows are measured differently to most windows. The normal way is to measure the width of the window, find the largest size and then add approximately 10mm.

Height, some stone bays will have cills some will not. Depending on what is currently installed, measure the height from under the cill if there is one in place and then add 5mm to the height

The reason for adding to the width and height is to allow for the window to sit behind the stone work giving a nice finish.

**Viewed Outside**

Please see information pages for a measuring guide
